

## MicroDDPs On The Road

It is again festival season here in the Benelux and on top of that there was the European Athletics Championships in Amsterdam, UEFA Euro 2016 in France and equipment is being shipped from here to the Summer Olympic in Brazil. Of course on many of these events DDPs are and have been present. However this year I am amazed how much rental in July alone is here going on with microDDPs from various rental companies.

\* **Rock Werchter 2016** was a large Open-Air pop festival in Belgium. Two microDDPs were used as shared storage between EVS Ingest and Premiere.

\* **European Athletics Championships** was held in Amsterdam. Two microDDPs were used as shared storage between EVS Ingest and Premiere.

\* **North Sea Jazz festival** was held in Rotterdam. One microDDP was used as shared storage between Just-In and Movie recorder and Premiere.

\* **UEFA Euro 2016** in France. One microDDP was in use there for edit jobs in the International Broadcast Centre in Paris.

\* **Summer Olympic 2016** to be held in Brazil. Three microDDPs are shipped to Brazil. Exactly how they are going to be used we do not know yet but we certainly will hear about this at some point.

\* **Tomorrowland** to be held in Belgium. Last year's event had worldwide more than 14 million live you tube views. This year is going to be bigger because events from a number of countries happening simultaneously are integrated both ways. Three micro-DDPs will be in use there.

Of course the list continuous since this is just the month of July.

\* **Dutch TV program** called: Herrie in het hotel. The show is still being ingested this month. One micro-DDP is in use with Avid Media Composers.

\* **Zwarte Cross** is a large Open-Air Festival in the Eastern part of the Netherlands. They welcome over 200.000 visitors. It is a Dutch farmers family festival with lots of music, motor cross, a big fair and stunts. One microDDP is used with Premiere for editing for a Dutch broadcaster at Zwarte Cross.

The microDDP10GbE is just 5Kg (11 lbs), 25 cm (10"), 1U, 19", quiet, low power, hand carried.

It comes in raid 5 protected SSD capacities of 8, 16, 32 and 60 TB with a throughput of 2200 MByte/s. Can be combined with anything, edit applications, render machines, indexers, MAM systems, ingest and playout solutions you name it.

With V5 software a microDDP can be used standalone and the next moment it can be an integral part of a bigger DDP setup without copying data. Or one can opt (also with V5) for a fully redundant mirror setup for mirrored ingest/recording or copying.
